Empathy Map
Script Control ACL - Restrict Record Access Based on Field

says

Records should be accessible only to authorized users.

ACL should protect sensitive records.

Thinks

How can we restrict access based on a field?

The script must check the field value correctly.

Does

Creates a Script Control ACL

Uses a script to check field conditions.

Tests access for different users.

Feels

Concerned about unauthorized access.

Confident when access works correctly.

Satisfied when records are properly restricted.

pain

Incorrect ACL script may allow unauthorized record access

Gain

Field-based access control improves record security.
