1.Project Goal

To develop a secure ServiceNow system that restricts access to records based on user roles and field values.

2. Main Activities

- Create the Institution Details table and required fields.
- Create users and roles.
- Configure Read, Write, Create and Delete ACLs.
- Apply the Branch-based access condition.
- Add the required script for access control.
- Test authorized and unauthorized access.

3. Resources Required

- ServiceNow Developer Instance
- Internet connection

- Administrator/security_admin access

- User and role configuration

- ACL configuration and scripting

4. Expected Result

The system should allow authorized users to perform permitted operations while restricting unauthorized access to records.

5. Project Outcome

A secure and role-based record access system is developed in ServiceNow.
